

proc_control::ControlModelF

```
graph BT; VelocityMode[proc_control::VelocityMode] --> ControlModelF[proc_control::ControlModelF];
```

A UML class diagram showing an inheritance relationship. The base class, 'proc_control::ControlModelF', is represented by a white rectangular box at the top. The derived class, 'proc_control::VelocityMode', is represented by a gray rectangular box at the bottom. A solid blue arrow points vertically from the top of the 'proc_control::VelocityMode' box to the bottom of the 'proc_control::ControlModelF' box, indicating that 'proc_control::VelocityMode' inherits from 'proc_control::ControlModelF'.
